

What is building up in your air ducts?

Did you know the EPA lists indoor air quality as one of the top five environmental risks to public health? 87% of American homeowners are not aware that pollution may be worse inside their homes than outdoors. The three most important methods of improving indoor air quality are contaminant removal, air filtration and increased ventilation.

Let Daniels Do It.

We use an advanced cleaning method to scrub your duct system clean. Plus, we can sanitize your ducts with an EPA registered* antimicrobial chemical, leaving your home fresh and clean! Get the facts!

Could the air in your home be harmful to your family?

Let Daniels add clean air to your home comfort!

Duct Cleaning Service

We have you covered – from heating & cooling to fresh & healthy air.

Your indoor air quality could be a problem!

Control dust and other contaminants by keeping your heating and cooling ductwork system clean.

According to the EPA, levels of air pollution inside the homes can be two to five times higher than outdoor levels. Your central air conditioning system completely cycles the air in your home three to five times a day. That means pollen, mildew, animal dander and mites circulate through your ductwork and in the air 24/7.

We inspect your ductwork to show you what you are breathing

Our duct cleaning specialists will make a visit to your home to evaluate your duct systems and follow up with a quote. We look for dirt, debris, animal droppings, mold moisture and much more. We will determine whether cleaning is necessary to improve the quality of your home's air.

Breathe clean air!

Call us today and have a highly trained technician inspect your duct work system!

Our duct cleaning process:

1. We start by removing all of your register covers and cleaning them thoroughly to remove dirt, grime and other contaminants.
2. Our technicians will insert the hose and rotating brush head into your duct work.
3. After the ducts are scrubbed clean. We can fog them with an EPA-registered* antimicrobial mist that leaves a pleasant scent behind.
